Bring Your Own Blocks

Using `ObsiTex` you can add your custom parsing blocks to the markdown parser. This is useful if you want to add custom elements to your markdown files that are not supported by the standard markdown syntax.

1 Line Break

`ObsiTex` doesn't support line breaks, but they might be added by creating a custom parser, as follows:

```python
from obsitex.blocks import LaTeXBlock
class LineBreakBlock(LaTeXBlock):
def __init__(self):
super().__init__("
newpage", in_latex=True)
@staticmethod
def detect_block(lines, index):
if lines[index].startswith("—"):
return LineBreakBlock(), index + 1
```

2 Add the custom block to the parser

```
from obsitex import ObsidianParser
parser = ObsidianParser(custom_blocks=[LineBreakBlock])
```
